

Gigabit Ethernet
Progressive Scan CCD Camera
KP-F33GV
Specifications (Preliminary) Ver2.4

1. General

The KP-F33GV is single CCD type camera which utilized the progressive scan CCD image sensor with square pixel for VGA format of 1/3-inch.

By adoption of Gigabit Ethernet interface, high-speed connection of maximum of 1 Gbps can be possible. Moreover, by using hub or switcher, construction of multiple camera system can be easily performed.

2. Principal features

1) Gigabit Ethernet interface

High-speed serial interface Gigabit Ethernet is supported and direct connection is possible to PC by the diameter cable of thin as compared with parallel output. It is possible to 100m.

2) GigE Vision correspondence

Based on Industrial camera interface standard GigE Vision, a maximum of 1Gbps high speed data transmit is available and suitable for image processing.

3) CCD drive functions

·Auto electronic Shutter mode (AES)

Adjusted automatically from 10 second to approx. 1/100,000 second.

·Variable electronic shutter mode

Variable at 1H steps from 10 second to approx. 1/100,000 second.

4) External trigger

An external trigger signal input can be used to capture an image at desired timing for instant view or processing. The software trigger via a Gigabit Ethernet cable and the hardware trigger can deal with all trigger signals.
