For immediate release

Euresys Embraces Linux

Euresys Announces Linux Support for its Image Analysis Software Tools and Frame Grabbers

Euresys eVision image analysis tools and PicoLo series of frame grabbers for standard cameras meet a great success. Many OEMs and integrators have already based their application on the robustness and power of the eVision software combined with the reliability and the excellent price-quality ratio of the Euresys frame grabbers. This success leads Euresys to continuously improve and expand the range of its products, proposing new features and new products to follow the customer's needs.

Now, Euresys adds Linux support to the already existing and strong support of Windows 98SE, NT, 2000 & XP. Euresys customers are now able to combine the ease-of use of the MultiCam driver and the eVision software tools with the cost-effectiveness of Linux.

MultiCam Driver for Linux supports PicoLo, PicoLo Pro 2, PicoLo Pro 3, MIO and will support very soon PicoLo Tetra and the Grablink series of frame Grabbers for Camera Link cameras, followed by our other frame grabbers.
